

# Bright minds wanted!

The OSRAM OLED development department offers a six month **internship** starting April 2017 or October 2017 (068566).

Working in the OSRAM OLED Research and Innovation department based in Regensburg, Germany, you will work on state-of-the-art solutions for current and upcoming problems in OLED substrate manufacturing and modeling.

## Exemplary Tasks:

- Taking care of current and upcoming development topics like simulation or deposition of materials.
- Conducting experiments in the cleanroom or the OLED test lab.
- Documentation of the developed processes or software tools needed.
- Documentation and presentation of results within the department.

## Requirements:

- Student of physics, material science, electrical engineering or similar field of study.
- Knowledge in Microsoft Office.
- Fluent in English (written and oral).
- Good organizational skills, orientation to quality and good communication skills.
- Starting April 2017 or October 2017 with 35 hours/ week.
